

National Severe Weather Warning Service

Chief Forecasters Assessment

Yet another storm is now developing to the west of the Azores. It will run northeastwards across western parts of the UK during Friday and into Saturday, before clearing to the northeast. The associated frontal systems will bring spells of heavy and persistent rain, especially across the southern parts of England and Wales as well as further very strong winds (see separate warnings). 10-20 mm of rain will fall fairly widely in the Yellow Warning area during this period, with 40 mm possible across parts of the southwest of England and south Wales. Showers following into Saturday may give localised accumulations of 5 to 10 mm in an hour.

The Met Office have issued a **Yellow Warning of Rain**

Valid from **12:00 on Fri, 14th Feb 2014** until **20:00 on Sat, 15th Feb 2014**

A new area of rain has arrived in southwest England during the early hours of Friday, and is moving quickly northeastwards and affecting many parts of the UK. Following this rain, areas of organised showers will move across Wales and the south of England overnight and during Saturday, adding to the rainfall accumulations. With very wet ground conditions in Wales and the south of England and following repeated heavy rainfall events earlier in the week, the public should be aware of the potential for further flooding in places, though impacts on Saturday may be lesser and more localised

The impacts from this rainfall may continue on some rivers on subsequent days and further information may be found by visiting the Environment Agency website or by calling the Environment Agency Floodline.

This is an update to the Alert first issued on Monday and should be viewed alongside the Amber warning issued for Friday.
